SYSTEMIC MODELING LABORATORY LAMS

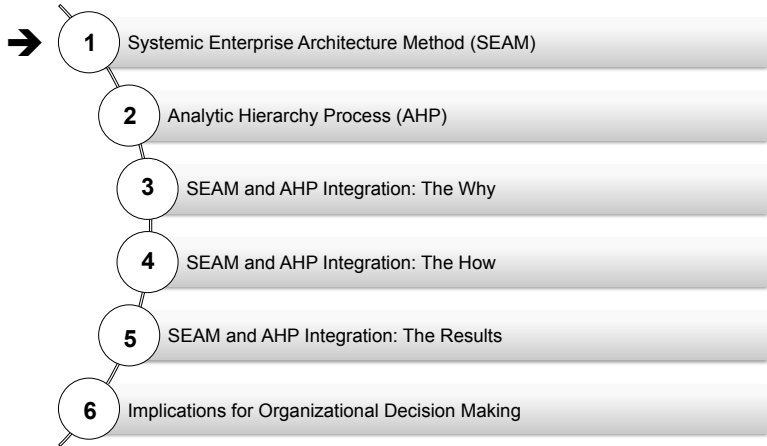

The Integration of an RE Method and AHP: A Pilot Study in a Large Swiss Bank

Arash Golnam, Sofia Kyriakopoulou, Gil Regev, Alain Wegmann

July 2013

Structure of the Presentation

- 1 Systemic Enterprise Architecture Method (SEAM)
- 2 Analytic Hierarchy Process (AHP)
- 3 SEAM and AHP Integration: The Why
- 4 SEAM and AHP Integration: The How
- 5 SEAM and AHP Integration: The Results
- 6 Implications for Organizational Decision Making

seam Systemic Enterprise Architecture Method (SEAM)

| | |
|---------------|--|
| What is SEAM? | <ul style="list-style-type: none"> An integration of systems thinking principles into discipline-specific methods. A methodology for problem structuring in business - IT alignment. |
| History | <ul style="list-style-type: none"> Developed in LAMS, EPFL. Applied for teaching and consulting since 2001 |
| Foundations | <ul style="list-style-type: none"> General Systems Theory RM-ODP (A software engineering ISO standard) |
| Applications | <ul style="list-style-type: none"> SEAM for Enterprise Architecture SEAM for Software Engineering SEAM for Requirements Engineering |

EPFL **SYSTEMIC MODELING LABORATORY LAMS**

What Type of Models?

Models are simplifications, abstractions of those aspects of reality that are deemed to be important by the modeler.

(Pidd, 2003)

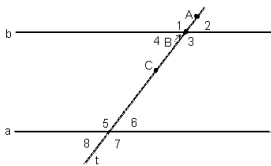

Modeling is constructing systems that account for some aspect of the domain to be investigated.

(Klir, 1991)

Modeling a system is required if sense is to be made of the system's behavior and the appropriate problem-solving measures are to be implemented.

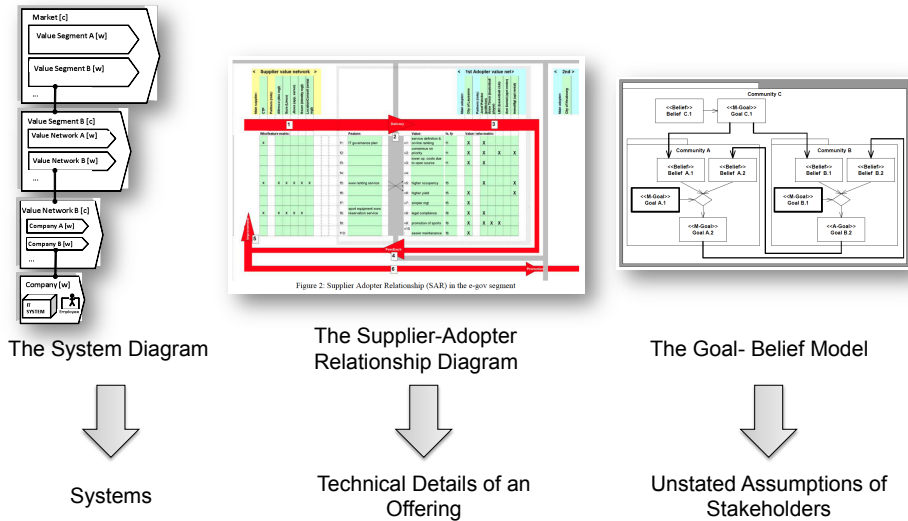

(Jackson, 2000)

SEAM – The Three Representations

Problem Structuring Process with SEAM

Structure of the Presentation

OR Method - The Analytic Hierarchy Process (AHP)

Multi-criteria Decision Making (MCDM)

Selection of the best alternative, from a set of alternatives, each of which is evaluated against multiple, and often conflicting criteria.

Multiple Attribute Decision Making (MADM)

problems are assumed to have a predetermined, limited number of decision alternatives.

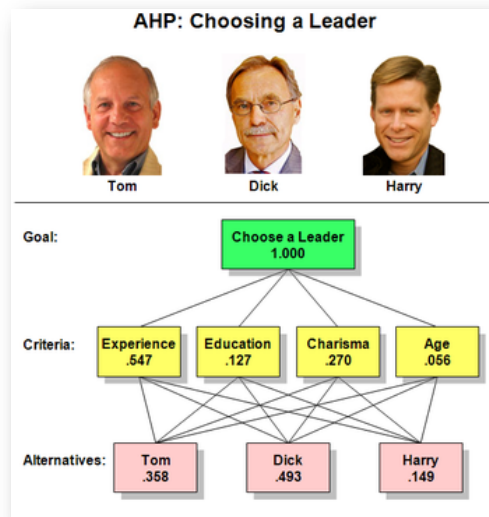

Multiple Objective Decision Making (MODM)

The decision alternatives are not given instead, the set of decision alternatives is defined by constraints using multiple objective programming.

Analytic Hierarchy Process

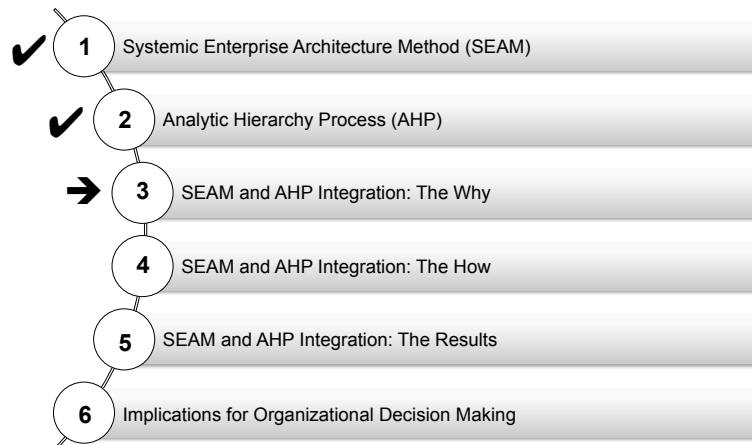

- Developed by Saaty in 1980.
- It is a popular and widely used method for multi-criteria decision making.
- Allows the use of qualitative, as well as quantitative criteria in evaluation.
- Wide range of applications exists:
 - Selecting a car for purchasing
 - Selecting a software application
 - ...

The Analytic Hierarchy Process (AHP) - Example

http://en.wikipedia.org/wiki/Analytic_hierarchy_process

Structure of the Presentation

The Guaranteed Cockroach Killer !!

(Gause and Weinberg 1989)

Guaranteed Cockroach Killer Instructions:

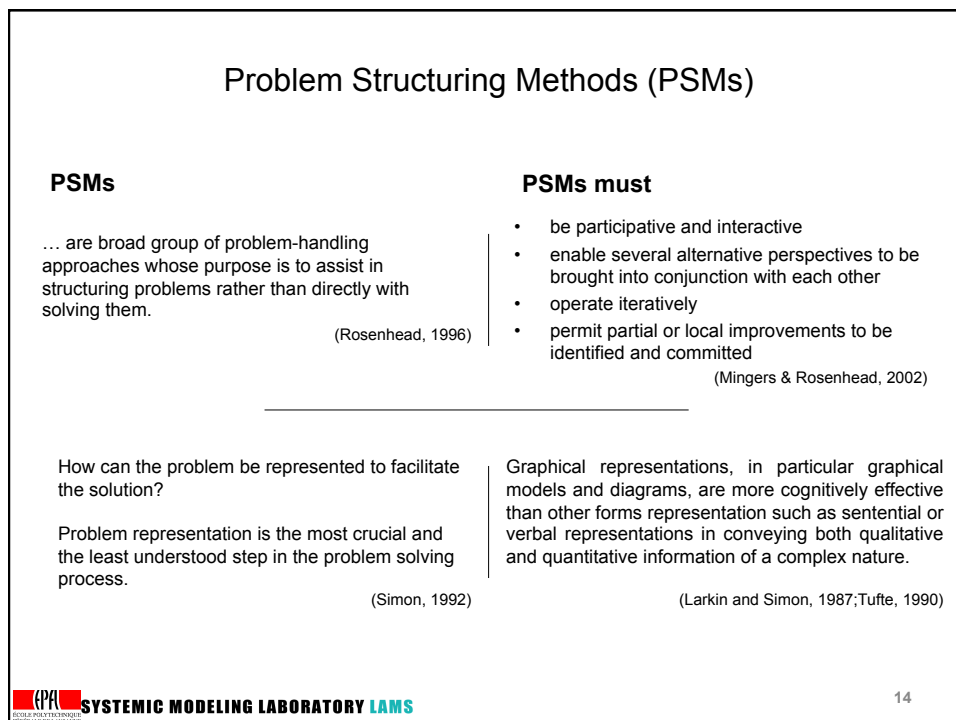

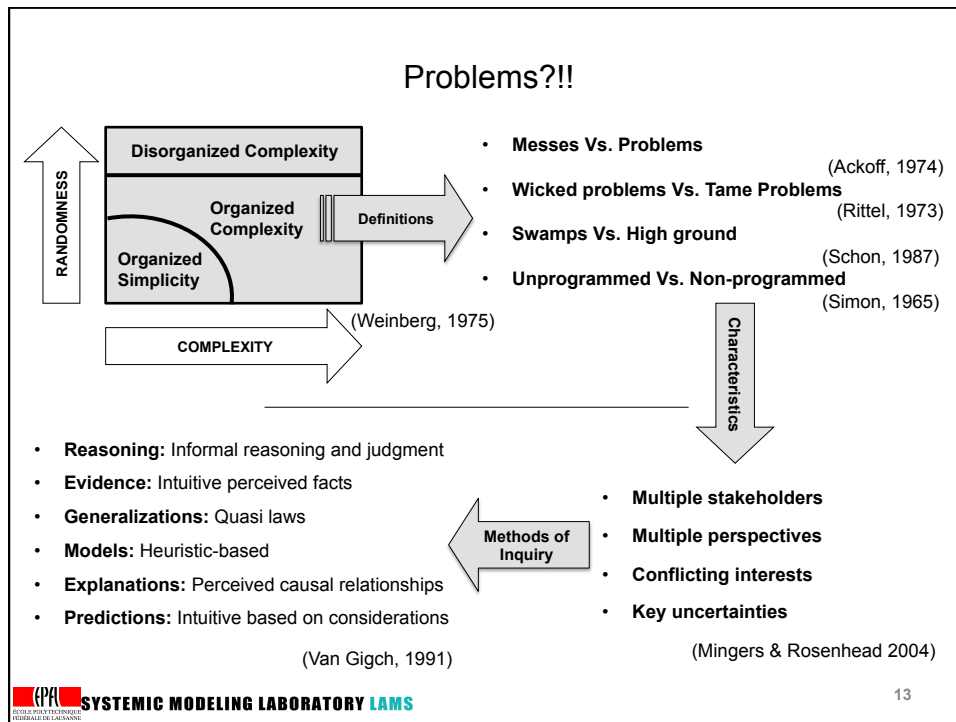

1. Place cockroach on block A.
2. Hit cockroach with block B.

Guaranteed OR Problem Solver ☺ Instructions:

1. Formulate the problem.
2. Construct a mathematical model.
3. Solve the model.
4. Test the model and the solution.
5. Put the solution to work.

PSMs in Action

(Mingers & Rosenhead, 2002; Mingers & Brocklesby, 1997)

Decision Making with AHP

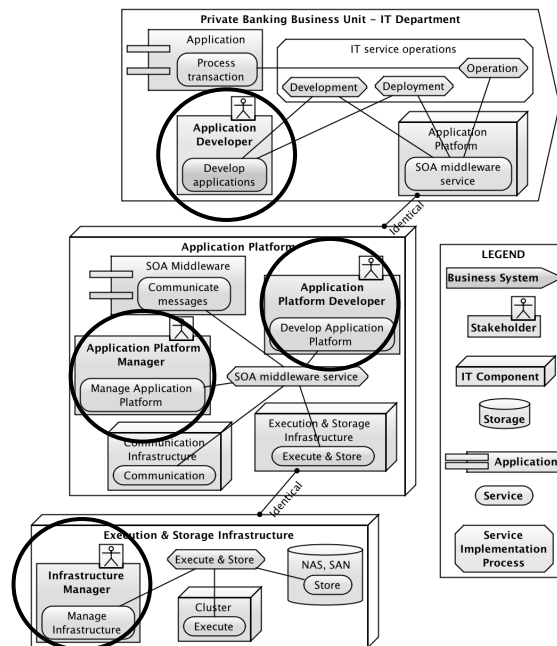

Research Question

Where do criteria come from in (group) decision making with AHP?

Structure of the Presentation

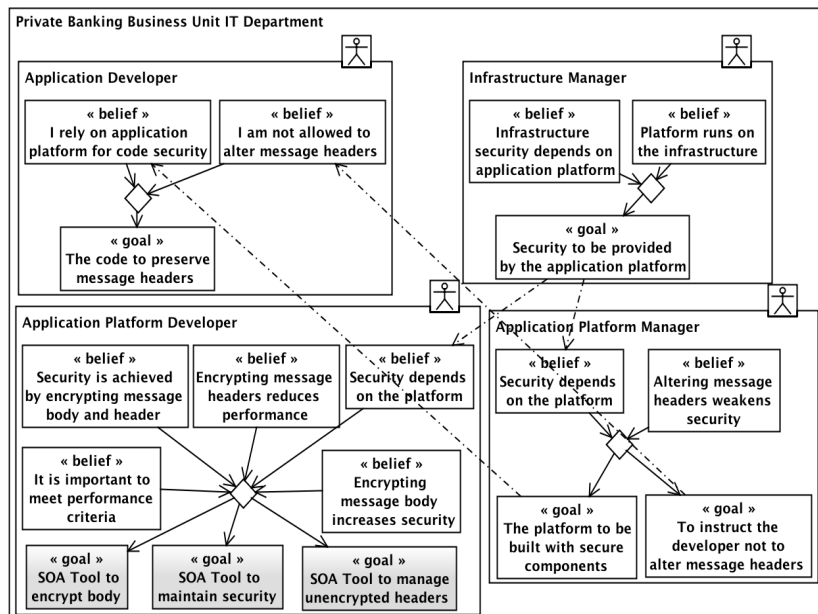

1. Stakeholder Identification

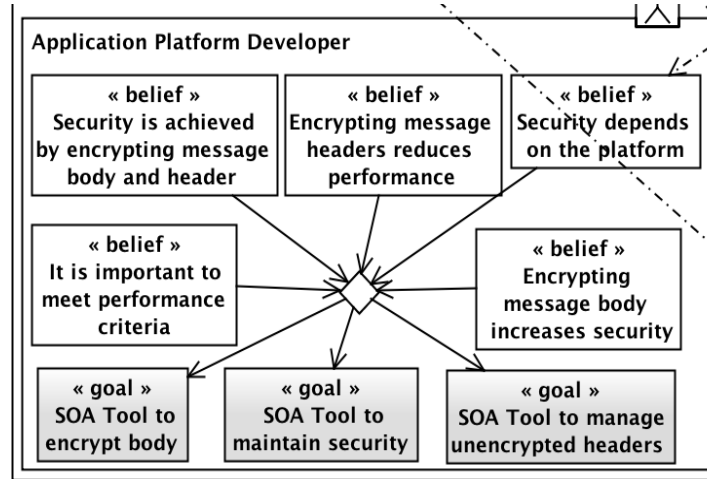

2. Stakeholders' Goals Surfacing

2. Stakeholders' Goals Surfacing – Cnt'd

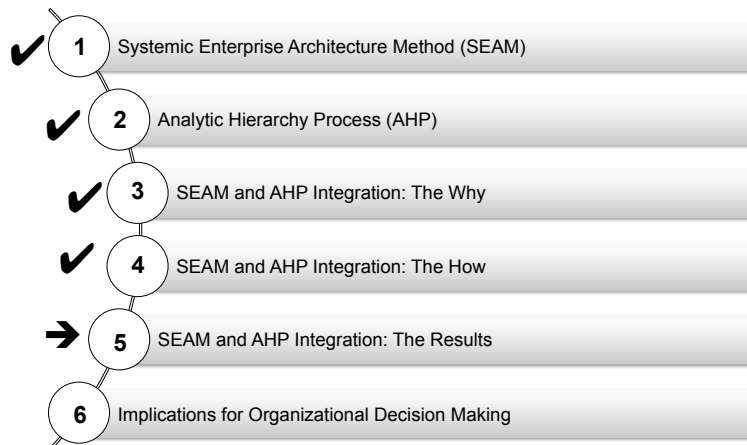

2. Stakeholders' Goals Surfacing – Cnt'd

3. Decision Criteria Definition

| | | | |
|-----------|--|------------|--|
| C1 | Service stack coverage - Java binding implementation of JAX-WS - .NET binding, compatibility with WCF - C++ binding | C6 | Name service lookup - Group multiple endpoints against a single service instance - Look up capability of a physical endpoint - Service endpoint availability information |
| C2 | Service virtualization - Hiding the true location of services - Central or p2p functionality - Dynamic composition of endpoint address | C7 | Protocols binding support - SOAP over HTTPS - SOAP over JMS - SOAP over HTTP - COBRA |
| C3 | Decoupling of business - Physical endpoint lookup - Late transport and data binding | C8 | Security - Message body encryption - Managing unencrypted message headers |
| C4 | Routing and mediation - Bridge different transport technologies - Bridge different wire formats | C9 | Service availability - Notify of changes on availability - Metrics to measure the availability - Monitor active and inactive services |
| C5 | Message and wiring - Comma delimited wire encoding - JSON wire encoding - Non-SOAP XML encoding | C10 | Service management - Transport and context properties in metadata - Logging and auditing - Policy and SLA in metadata |

Structure of the Presentation

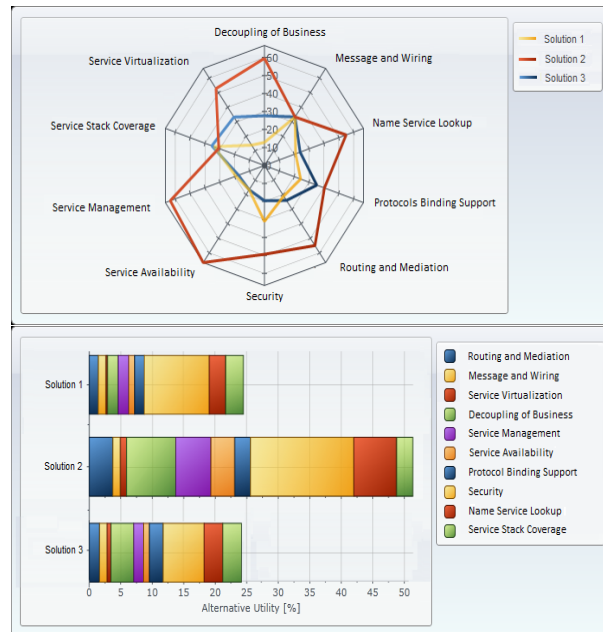

4. Evaluation Phase

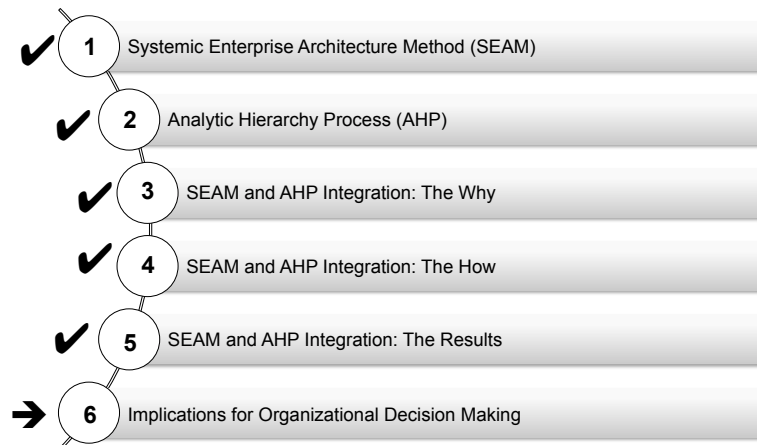

Alternatives

| | Tool | Key Features |
|---|-----------|--|
| 1 | AXIS 2 | Implementation is available in C/C++ and Java |
| 2 | CXF | Development of web services using frontend programming APIs, like JAX-WS. |
| 3 | WSO2 | Implementation is available in C, C++, PHP, PERL, RUBY, PYTHON, JAVA. |
| 4 | METRO | Offers development of Web Services by using Java Technology APIs and tools powered by SUN JAVA. It consists of JAX-WS, JAXB, and WSIT. |
| 5 | JBossWS | It includes many specifications / standards implementations as well as tools to improve ease of use, endpoint management and monitoring. |
| 6 | Spring WS | Provides features such as configuration, transaction management, object-relational mapping, database abstraction, logging, etc. |
| 7 | WCF | It's based on .NET framework, can be developed using languages such as Visual Basic, C/C++, C# and Java. |

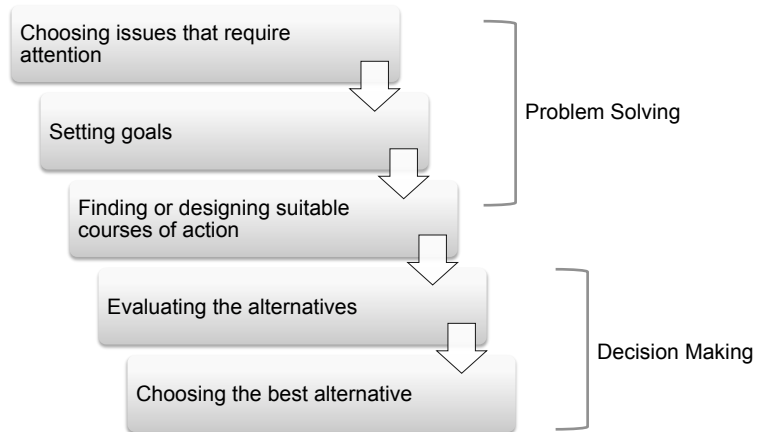

4. Evaluation Phase – Cnt'd

Structure of the Presentation

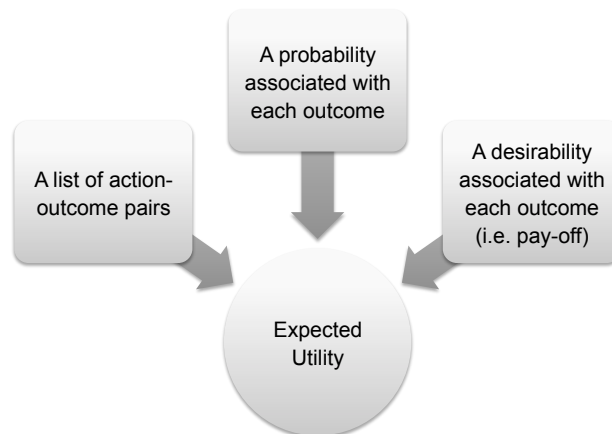

Organizational Problem Solving and Decision Making

(Simon, 1992)

29

The Rational Choice Model

(Radner, 1972; Bross, 1953)

30

Divergence from the Rational Choice Model

| Source of divergence | Divergence from Rationality | Ref. |
|--|--|---|
| Limited computational capacity of the decision maker | Bounded rationality and satisficing | (Simon, 1995) |
| Dynamic and ambiguous nature of preferences | Development and evaluation of alternatives are impractical | (March & Shapira, 1992) |
| Conflicting and inconsistent interests among decision makers | Political brokerage , accommodating a coalition of preferences | (March, 1962; Mingers & Rosenhead, 2004) |
| Normative/affective (N/A) factors outweigh the logical/empirical (L/E) factors | Omitting alternatives or assigning weights to certain alternatives | (Etzioni, 1988) |
| Decision maker's Judgment | Judgment is the prime ingredient in evaluation of alternatives | (Tversky & Kahneman, 1974; Mintzberg, 1976) |

ANNUAL REPORT

The Structure of "Unstructured" Decision Processes

Henry Mintzberg; Duru Raisinghani; Andre Theoret

Administrative Science Quarterly, Vol. 21, No. 2, (Jun., 1976), pp. 246-275.

.....As you would expect, however, not all of our important decisions can be made in this enviable, math-based way. Sometimes we have little or no historical data to guide us and proactive experimentation is impossible, impractical, or tantamount to a decision to proceed. Though data, analysis, and math play a role, the prime ingredient in these decisions is judgment.

Jeff Bezos Letter to Shareholders 2005
