Some Scene-Setting

Requirement work is changing

Theories and tools must change

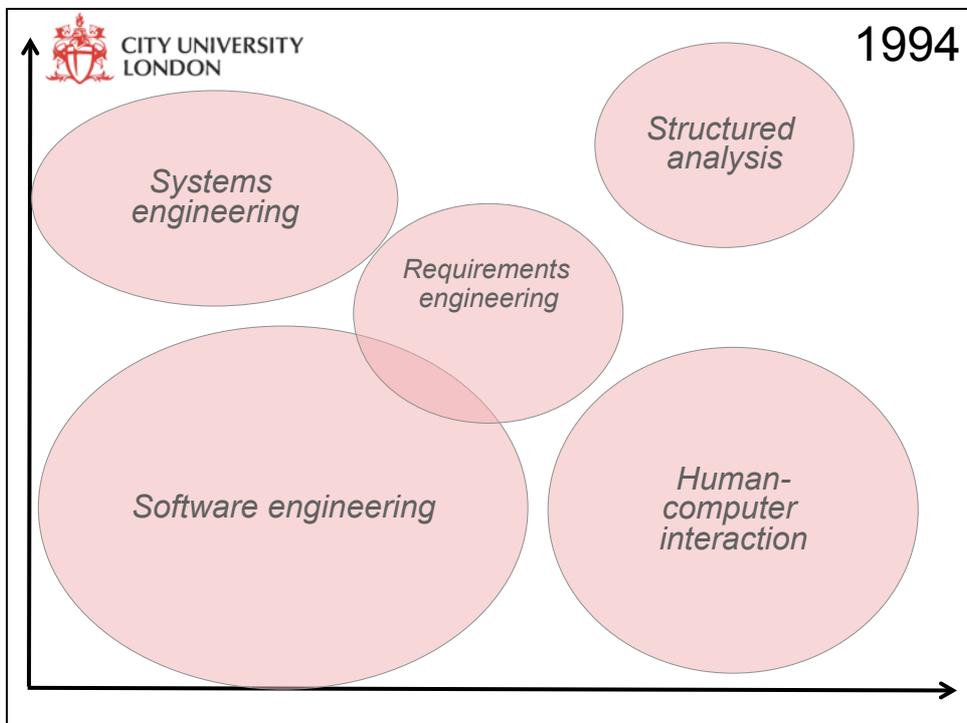

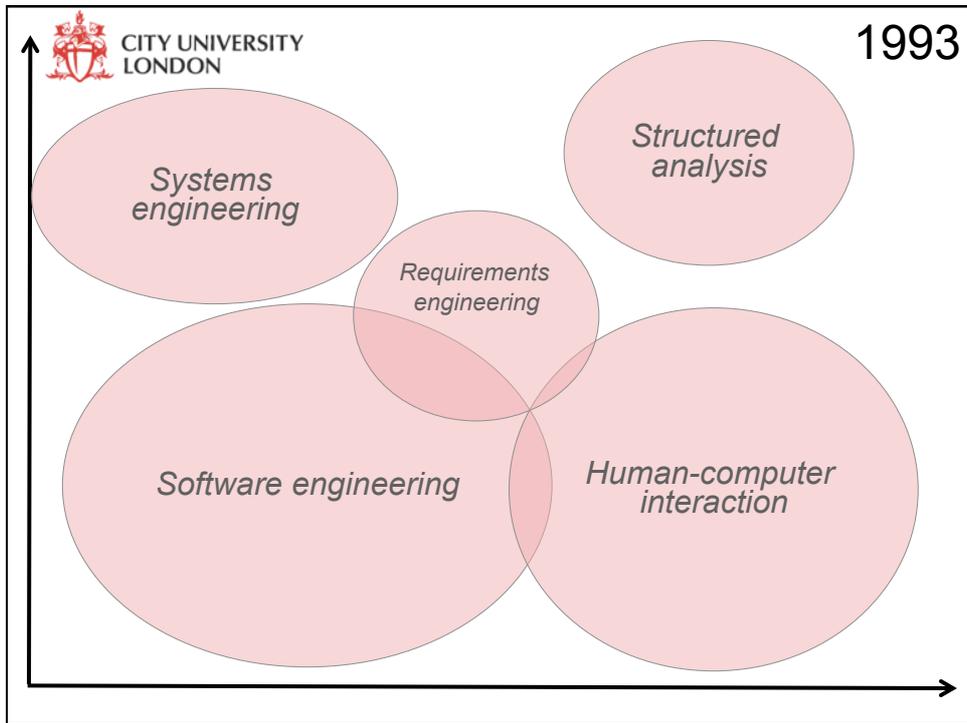

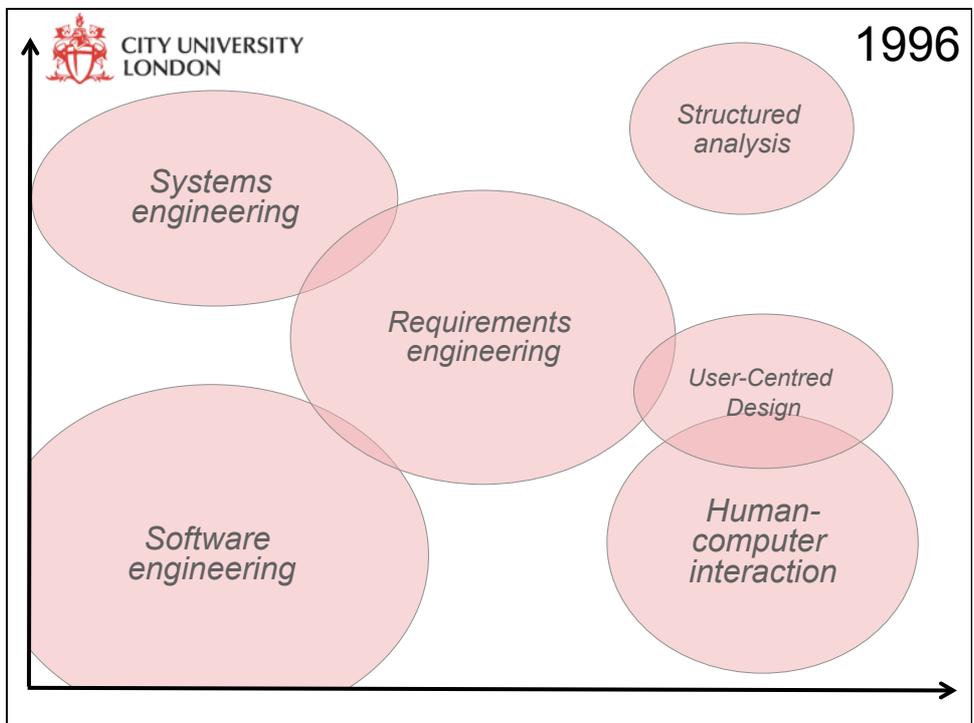

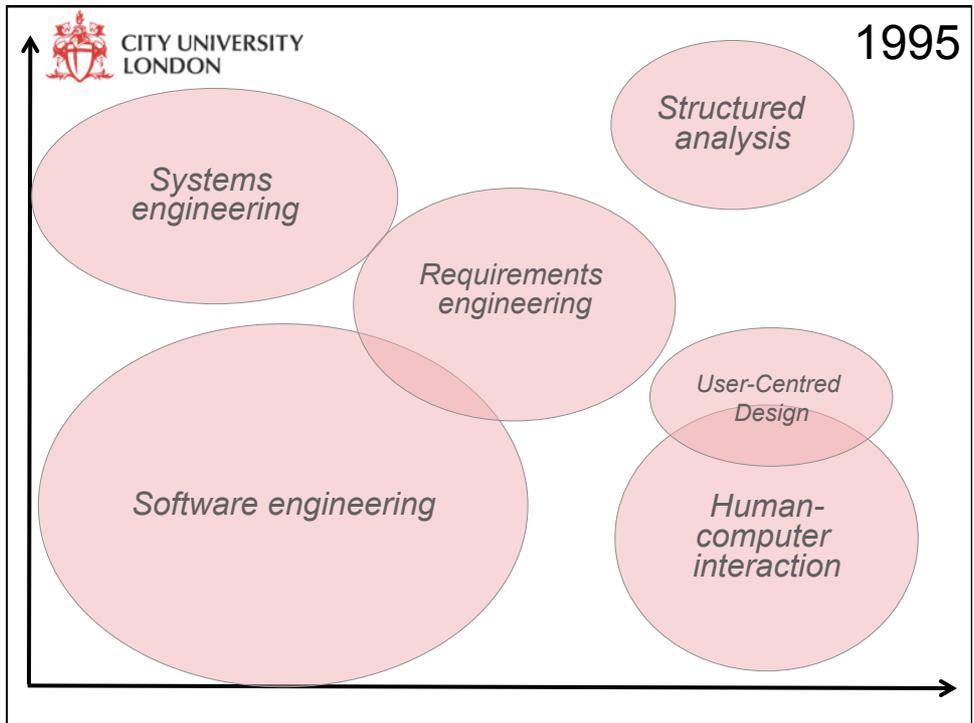

Modern requirements work is
inherently creative

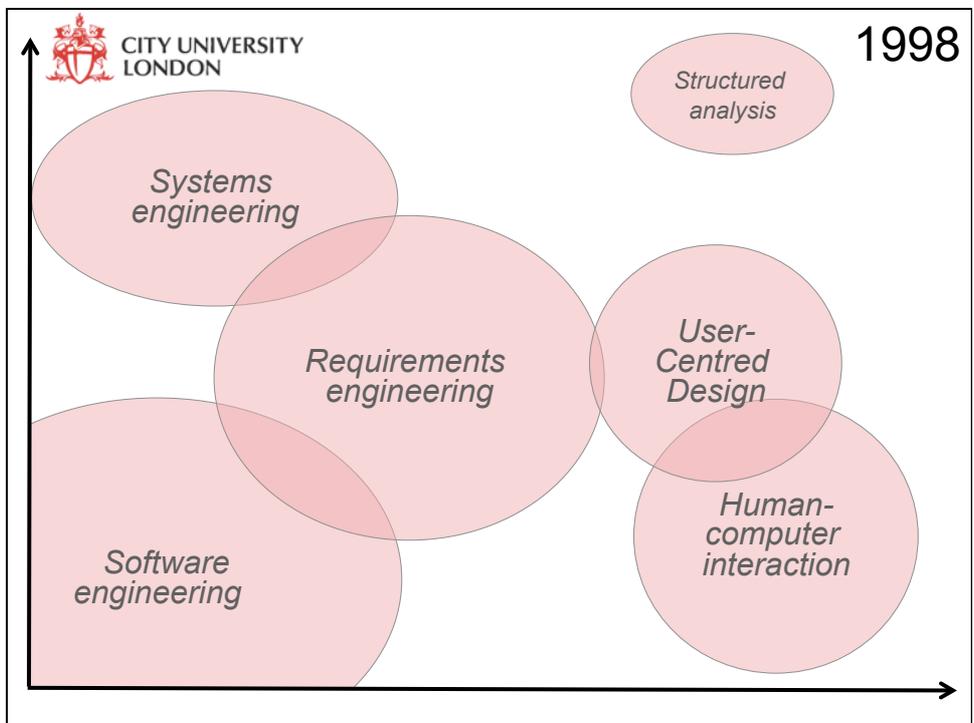

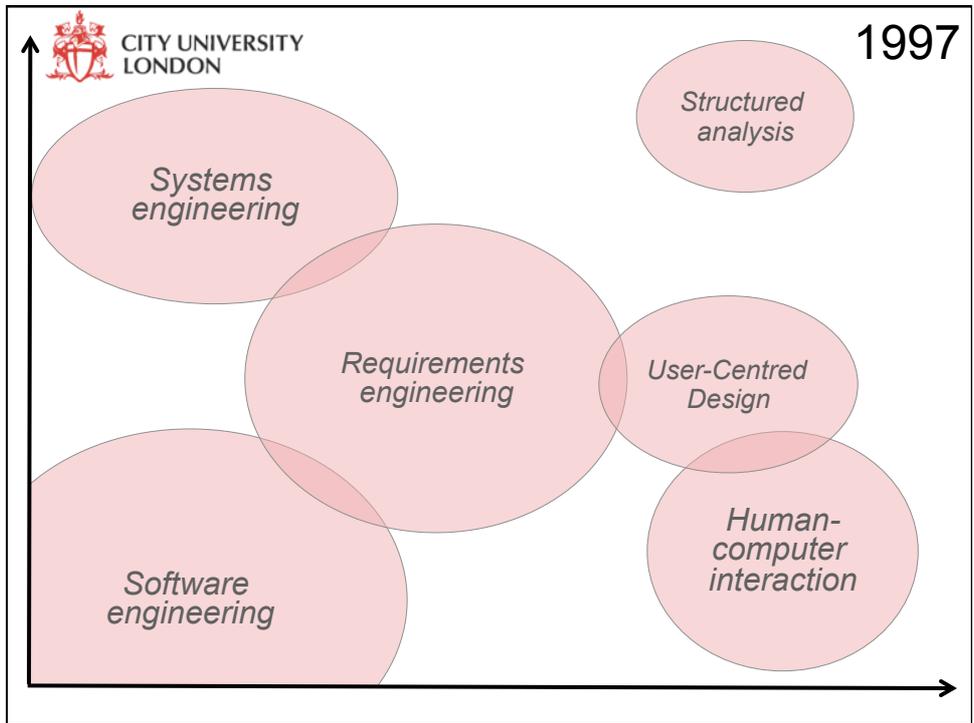

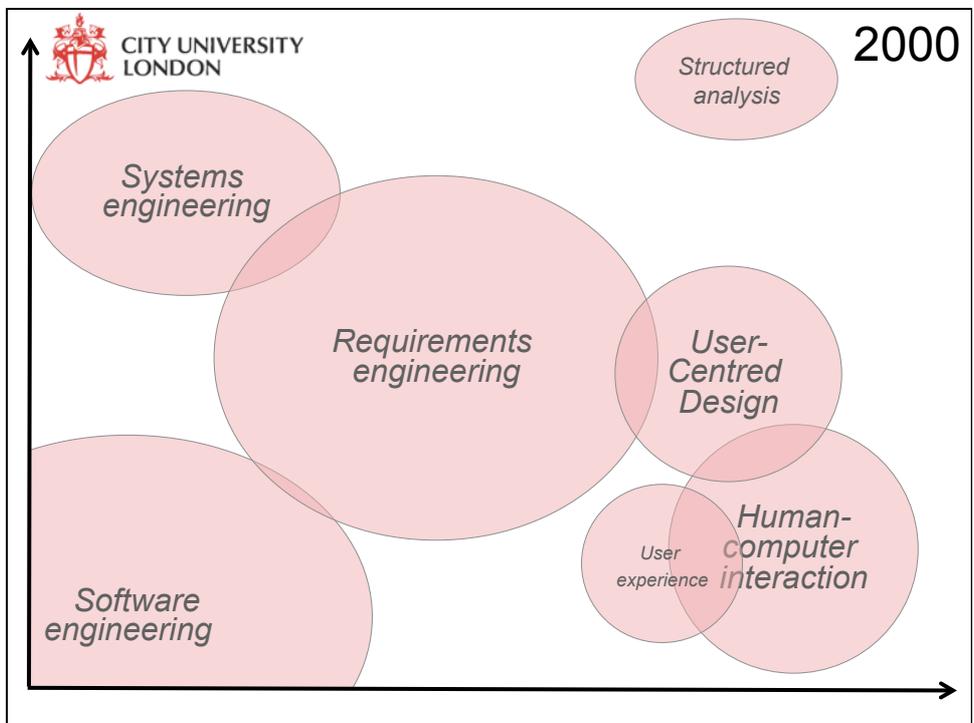

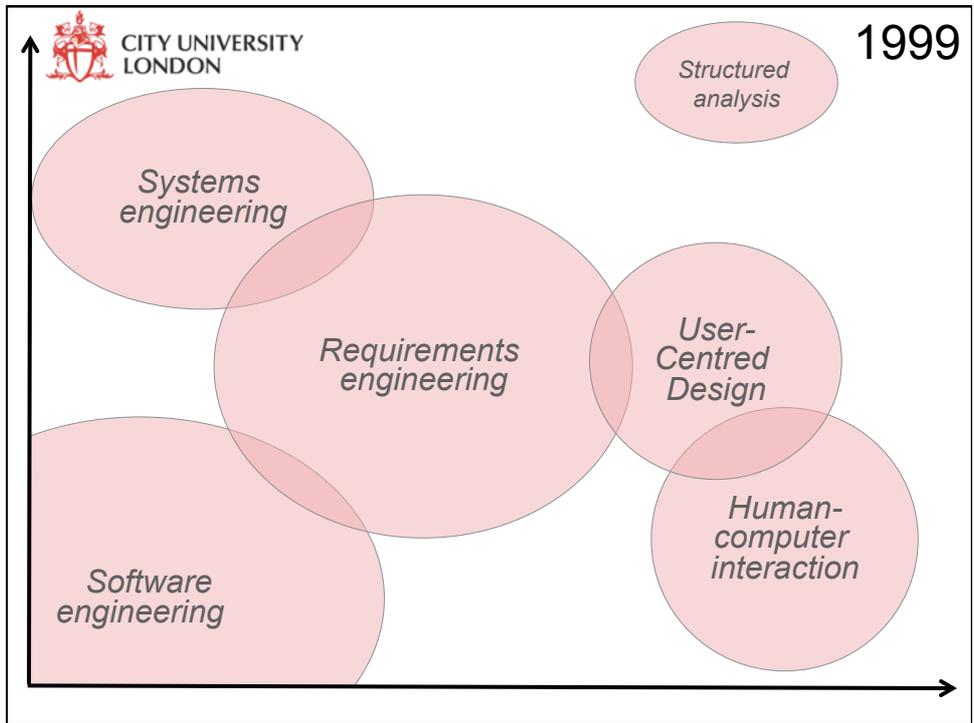

Convince that requirements
engineering as creative information
search and idea discovery

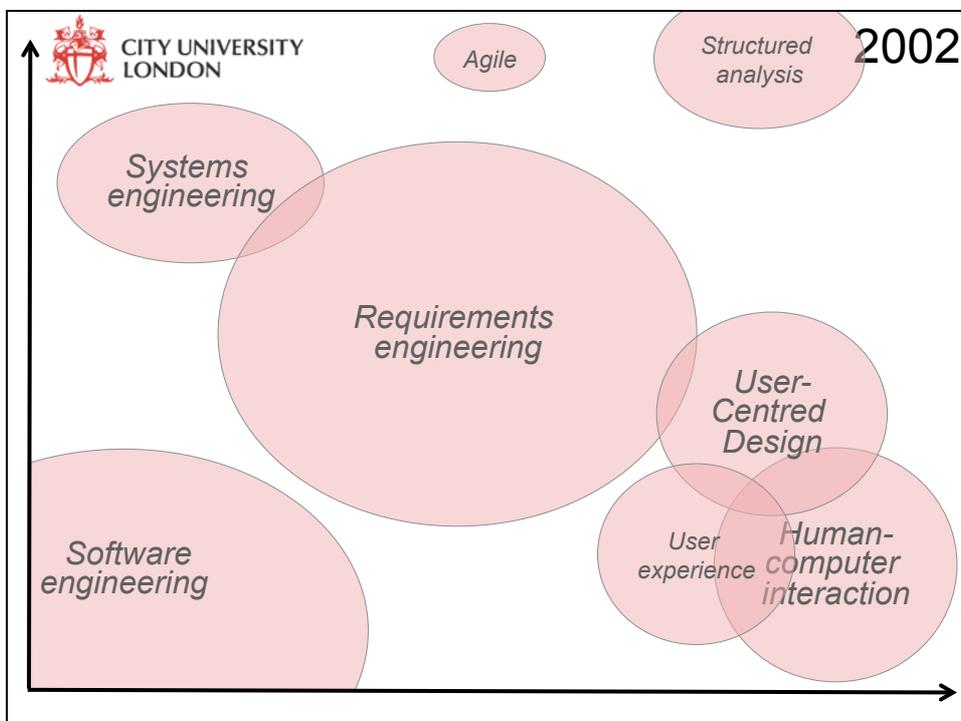

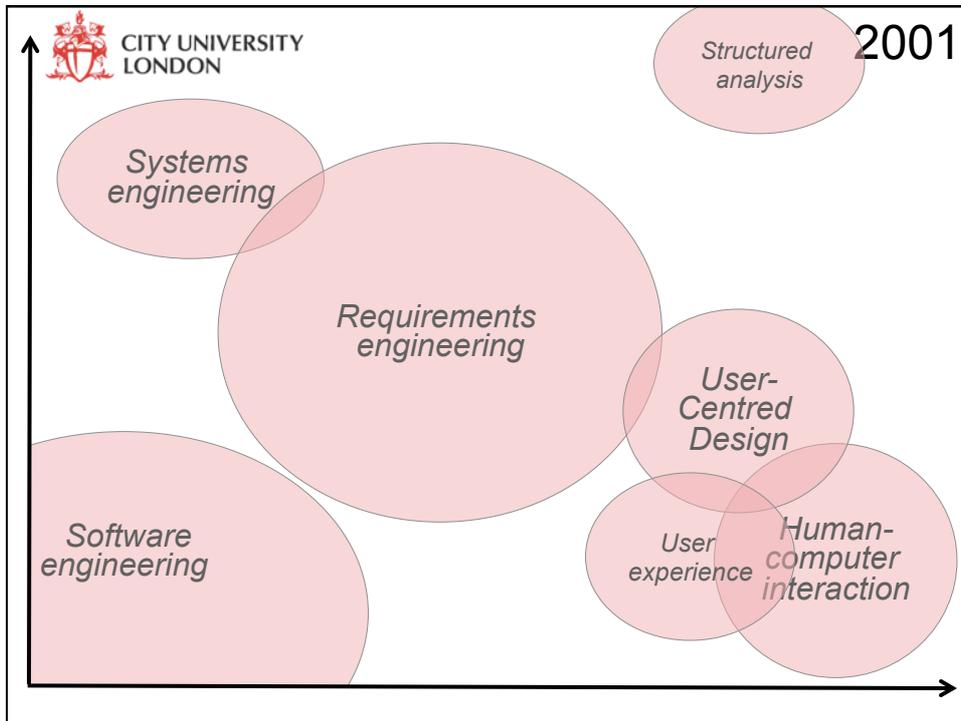

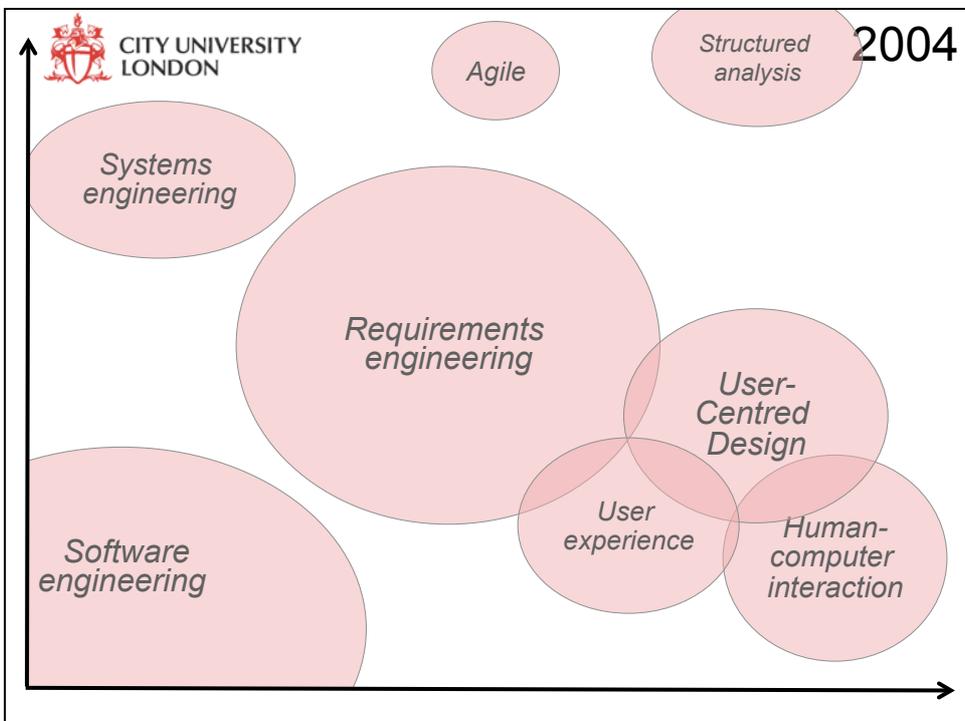

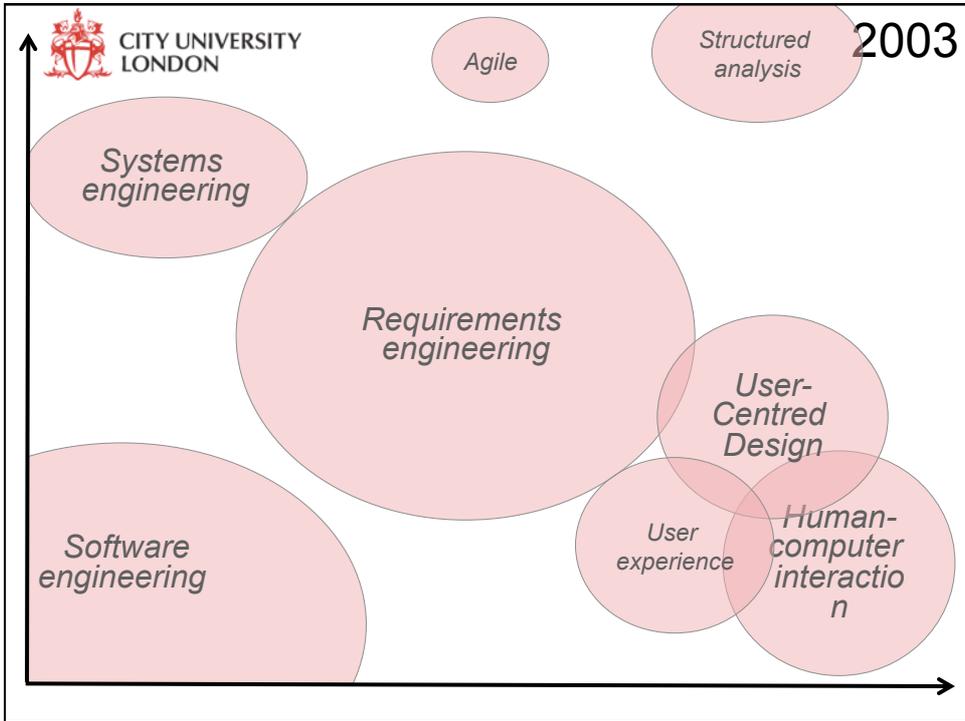

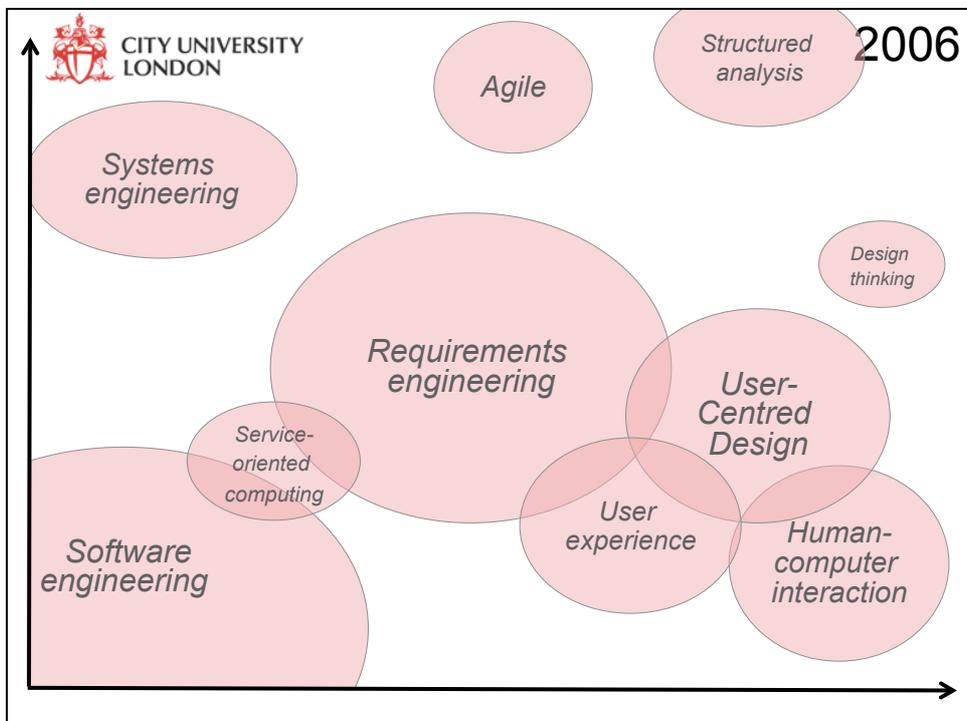

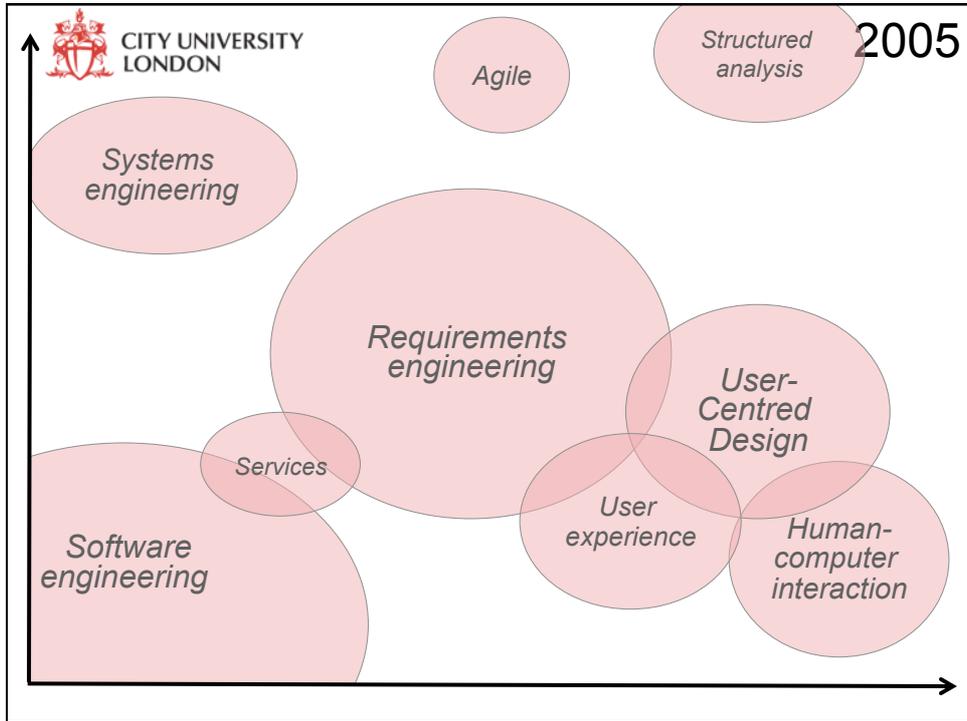

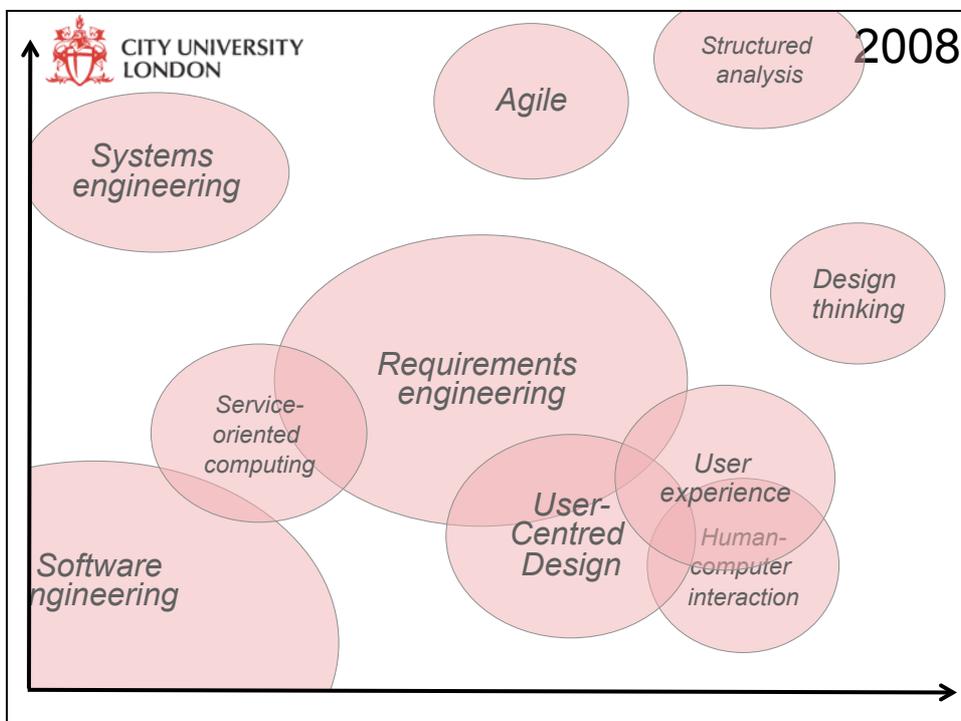

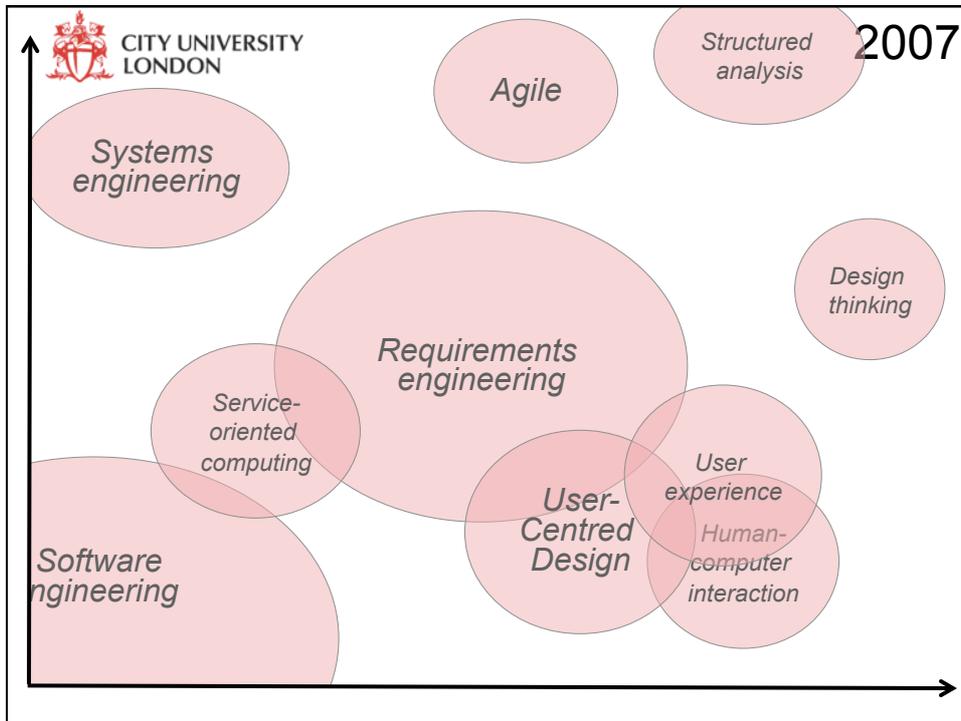

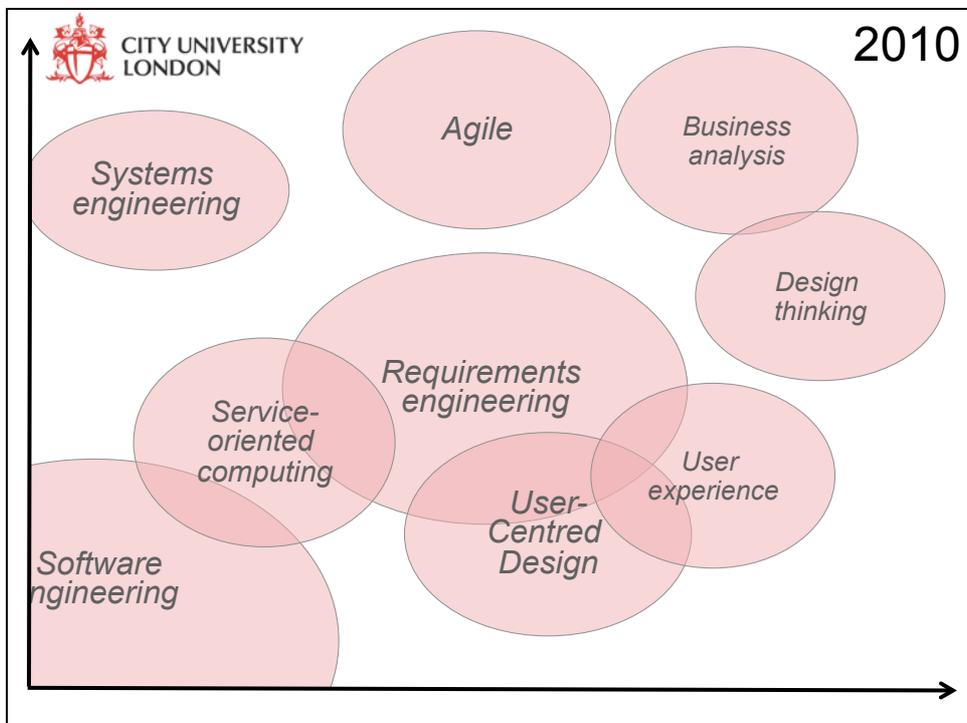

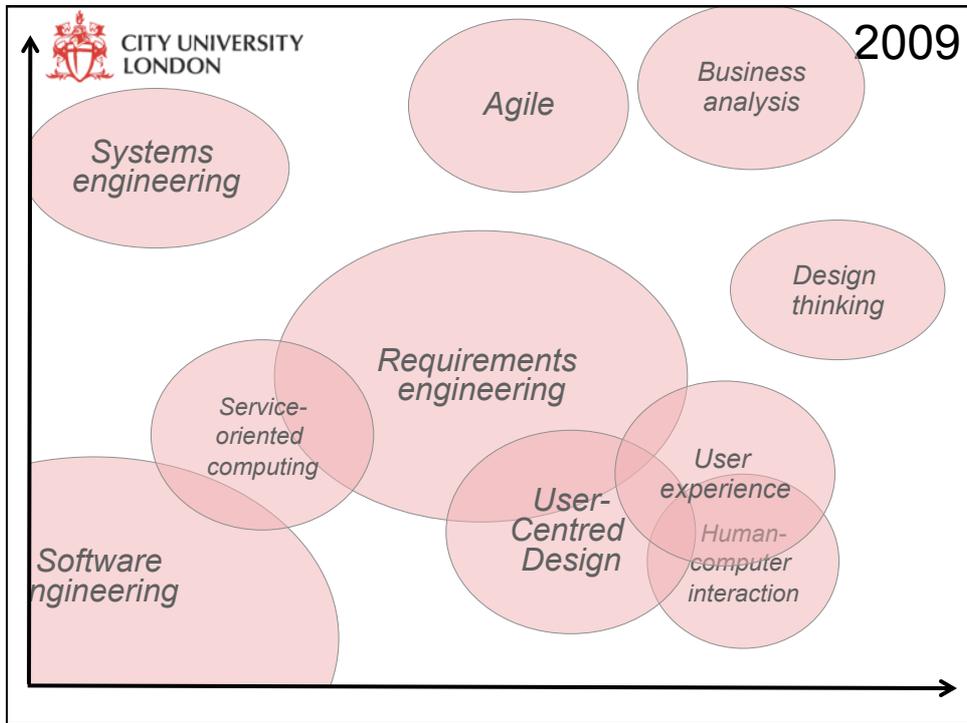

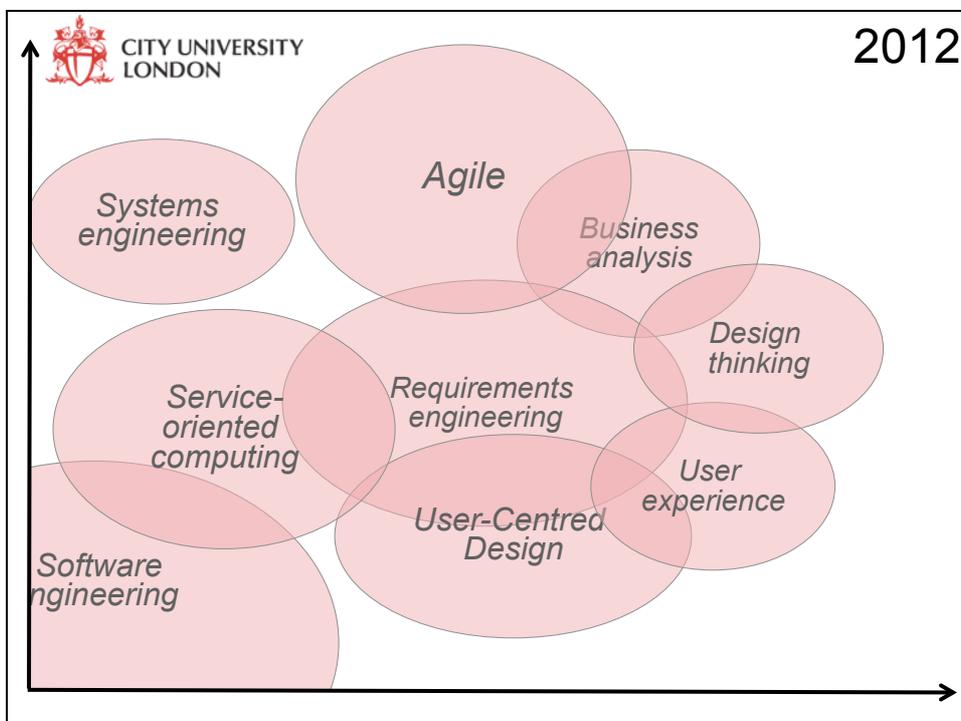

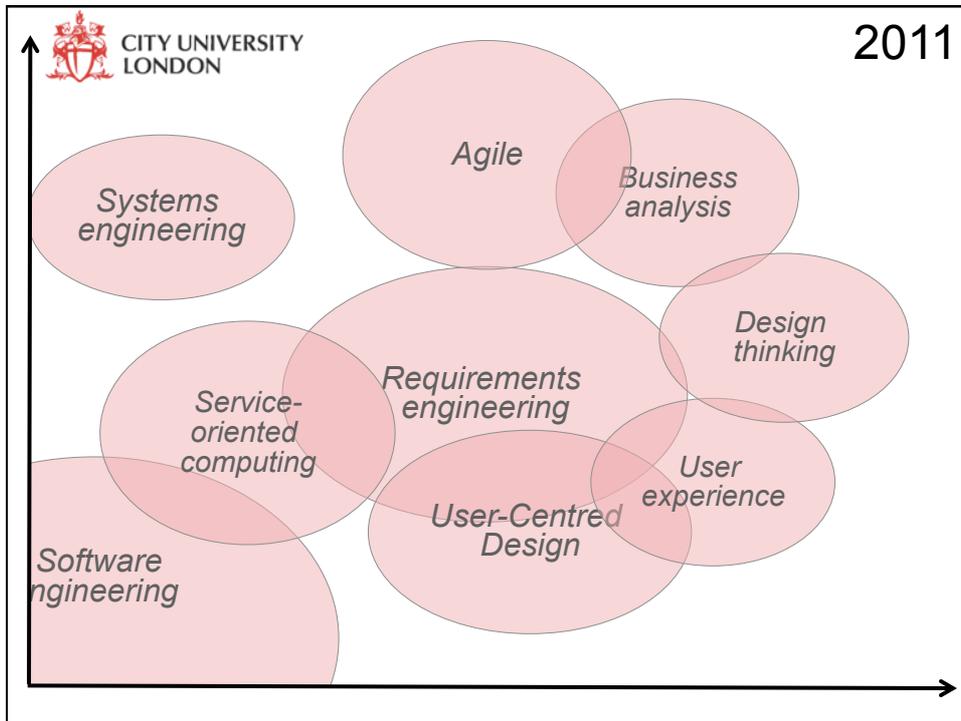

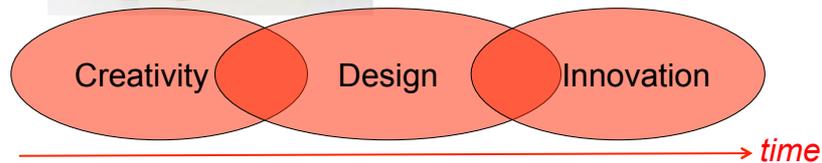

Design Practice in 2013

UK Design Council

- Design **shapes ideas** to become practical and attractive propositions for users or customers. Design may be described as creativity deployed to a specific end
- Design **includes software design**

The Reality about Requirements

Accept that

- Elicited requirements limited by perceptions of **what is possible**
- Customers are frequently **rear-view** mirrors
- People **don't** separate requirements from design

Requirements encapsulate **creative thought**

- Stakeholders already thinking about future

Denys Lasdun

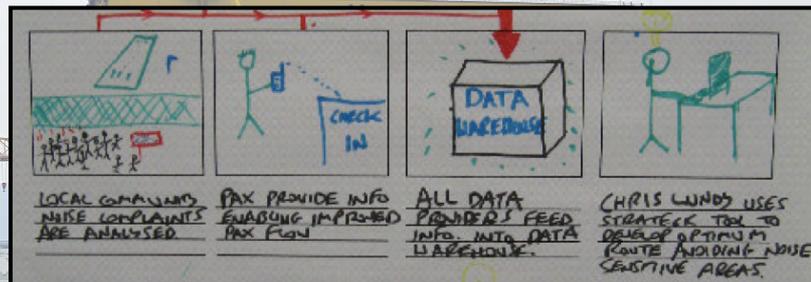

- “*Our job is to give the client, on time and on cost, not what he wants, but **what he never dreamed he wanted**; and when he gets it, he recognizes it as something he wanted all the time*”

A Real-World Example

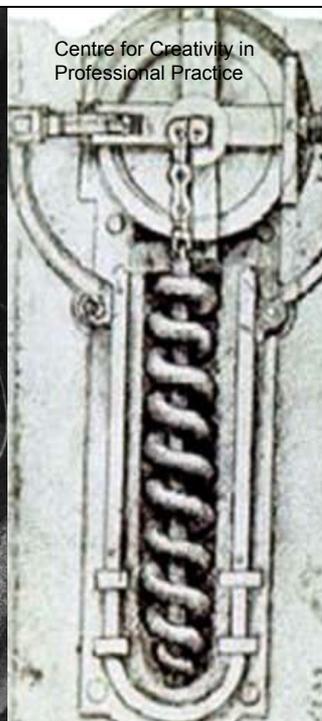

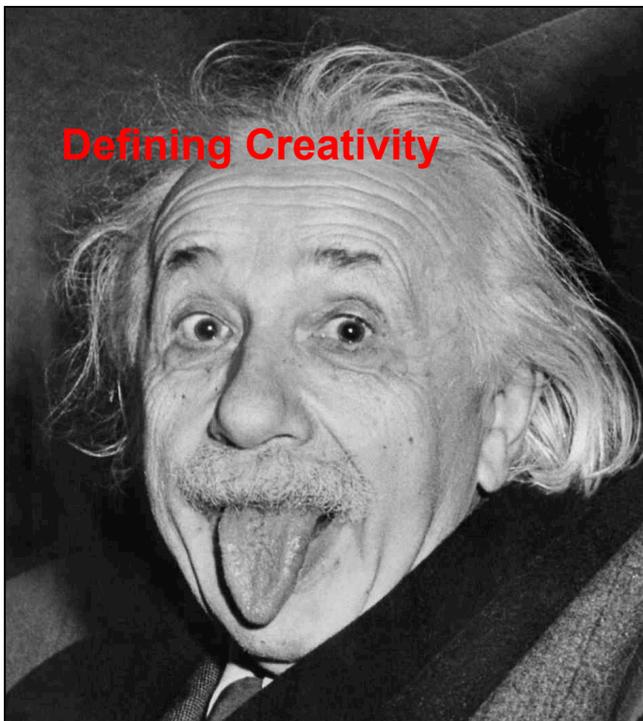

Removed key constraint: weather variability

Steam catapults; glided approaches; weather-adapted approach routes

.. not what they wanted, but what they never dreamed they wanted..

Defining Creativity

A Prototypical Definition of Creativity

Sternberg and Lubart (1999) define creativity as

- “*the ability to produce work that is both novel (i.e. original, unexpected) and appropriate (i.e. useful, adapted to task constraints)*”

Novel with respect to

- **H-Creativity**: historically creative – new to person-kind (Boden 1990)
- **P-Creativity**: psychological creative – new to the person, but not to person-kind or others (Boden 1990)
- **S-Creativity**: situated creativity – a designer or reasoner had an idea for a specific task novel in that particular situation or domain (Suwa et al. 2000)

Engenders **surprise**

- Deviation in patterns of outcomes (Maher et al. 2013)

Structuralist Creativity

Information processing

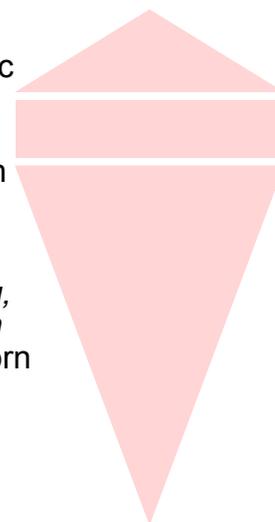

- Exhaustive, structured and systematic search of **divergent** and **convergent** spaces
- Idea and concept generation are both **directed** and **deliberate** (Plsek 1997)

CPS Method

- **Six stages**: *mess finding, data finding, problem finding, idea finding, solution finding and acceptance finding* (Osborn & Parnes 1953)

Digital technologies shift focus from

- Information search to **human-centred creative cognition** (Kerne et al. 2008)

Boden (1990) Categories of Creativity

1. Exploratory creativity

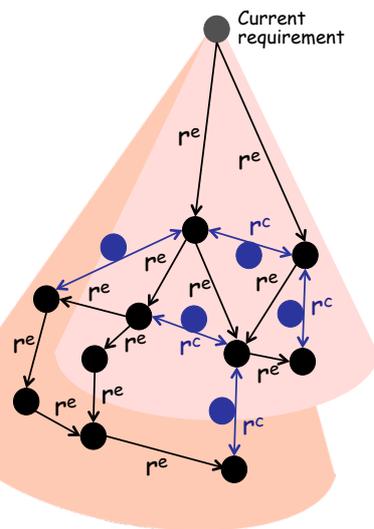

- Search space of partial and complete possibilities
- Rules exist to enable traversal of search space

2. Combinational creativity

- Make unfamiliar connections between familiar possibilities in the search space

3. Transformational creativity

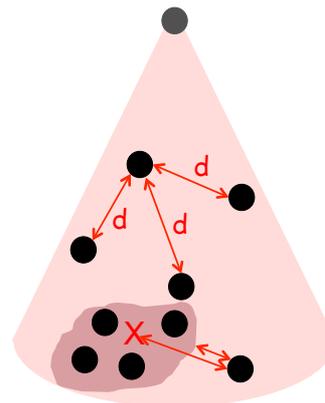

- Challenge the constraints on the search space
- Enlarge space of possible ideas to explore

Defining Novelty

Core to creativity research

- Ritchie (2001) specified formal criteria for creative behaviour of software programs
- Measures *dissimilarity* to existing domain examples
- Shortest *distance* to closest centroid, longest *distance* to centre (Maher & Fisher 2008)
- Exploit *requirements similarity matching engines* – computed dissimilarities in analogical matches (Zachos et al. 2008)

Emergence of Computational Creativity

To replicate human-level creativity using computers

– Digital visual art, poetry, stories, music, metaphors ...

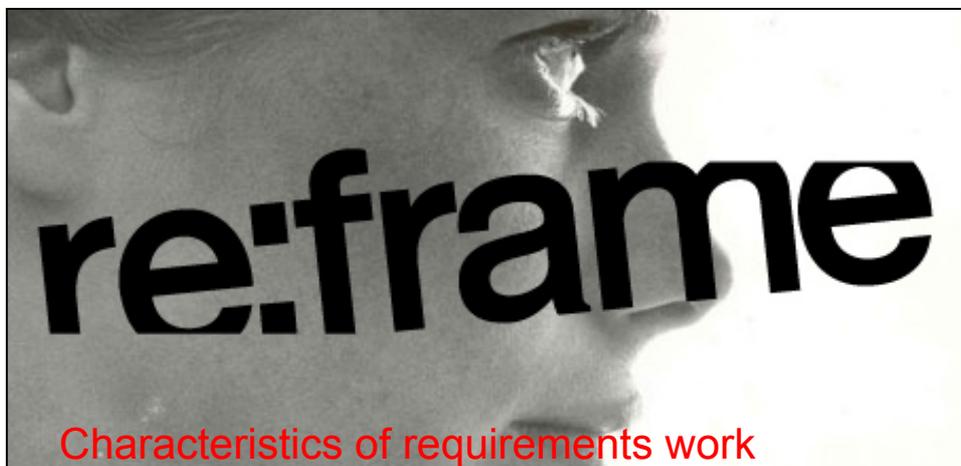

Examples

Forgive me, Father, for I have sinned. It has been a month since my last confession. An enemy slid. The enemy fell. The enemy injured himself. I located a curative plant. I cured the enemy with the curative plant. The tlatoni kidnapped me. The enemy sought the tlatoni. The enemy travelled. The enemy, um, looked. The enemy found the tlatoni. The enemy observed, uh, the tlatoni. The enemy drew a weapon. The enemy attacked the tlatoni. The enemy killed the tlatoni with a dagger. The enemy rescued me. The enemy entranced, uh, me. I became jealous of the enemy. I killed the enemy with the dagger. I killed myself, uh, with the dagger. Ten Hail Marys? Thank you, Father.

Generative Requirements Engineering with Vatale 2016 Course
Exploring the Space of Requirements 2013

Imagine machines that generate creative requirements that we never dreamed we wanted...

Characteristics of requirements work

- Structured search of changing spaces
- Generate novel and useful outcomes
- Practical propositions for users or customers
- Sometimes surprised by outcomes
- Can be machine-led

Requirements work can be framed as creative

Five Requirements Techniques

1. Facilitated workshops
2. Analyzing emergent system properties
3. KAOS obstacle analysis
4. Requirements-based product configurations within constraints
5. Model checking requirements specifications in TROPOS

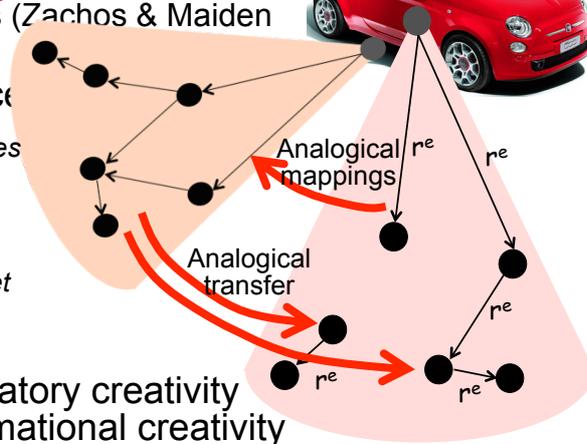

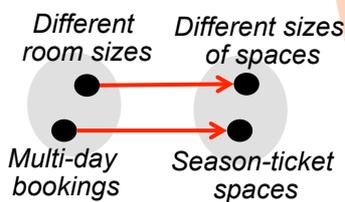

Facilitated Creativity Workshops

Fiat real-time parking space booking

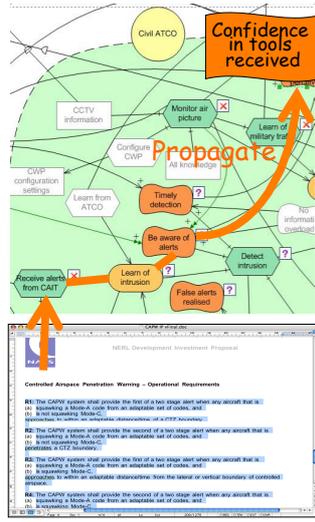

– Retrieved analogies: hotel reservation web applications (Zachos & Maiden 2008)

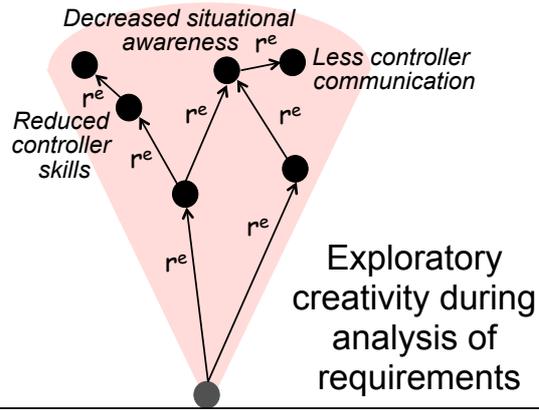

Analogical inference

Analyzing Emergent System Properties

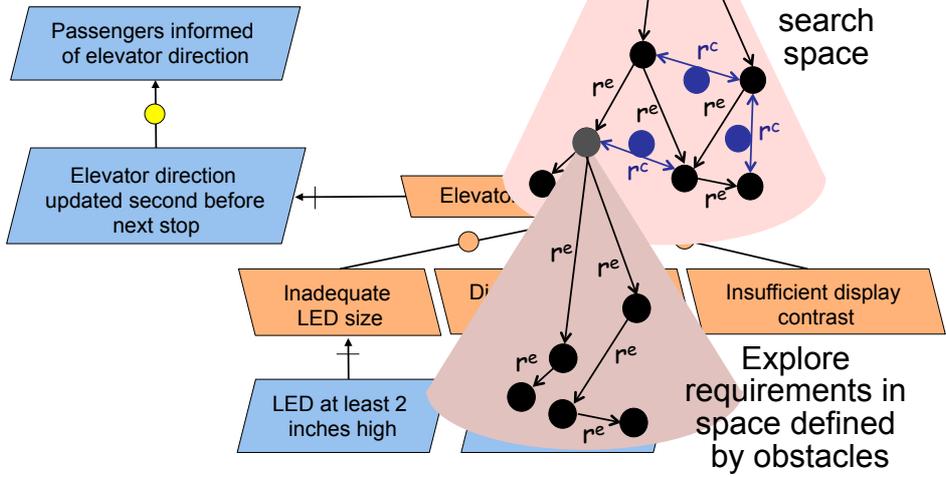

Emergent qualities of system from new software requirements – (Maiden et al 2007)

KAOS Obstacle Analysis

Goal analysis (Objectiver 2007)

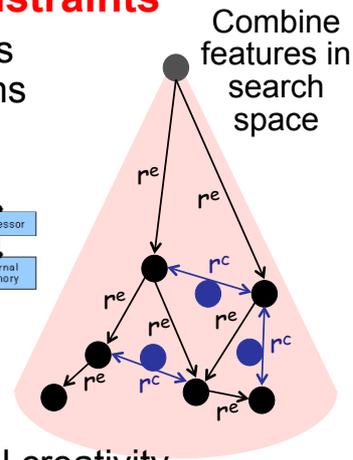

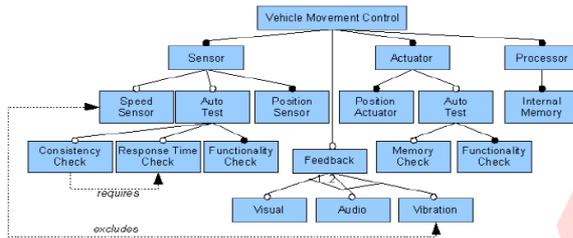

Requirements-Based Product Configurations within Constraints

Discover permitted combinations of different product configurations

– Salenisi et al. (2010)

Combine features in search space

Combinational creativity

Model Checking Requirement Specifications

i*/TROPOS specification (Fuxman et al. (2001))

Avoid unreasonable claims

Dependency CoverDamages

Fulfillment

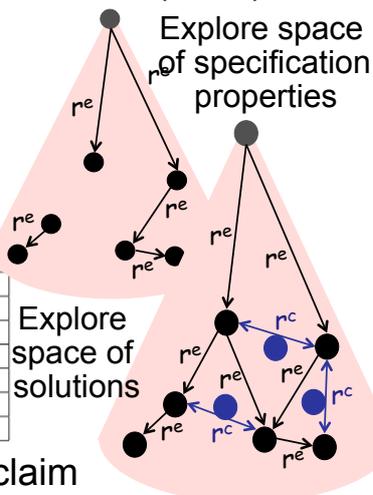

assertion condition for dependee

$cl.car.runsOK \rightarrow \exists rep : RepairCar$

$(rep.cl = cl \wedge \text{Fulfilled}(rep))$

Generates counter-examples

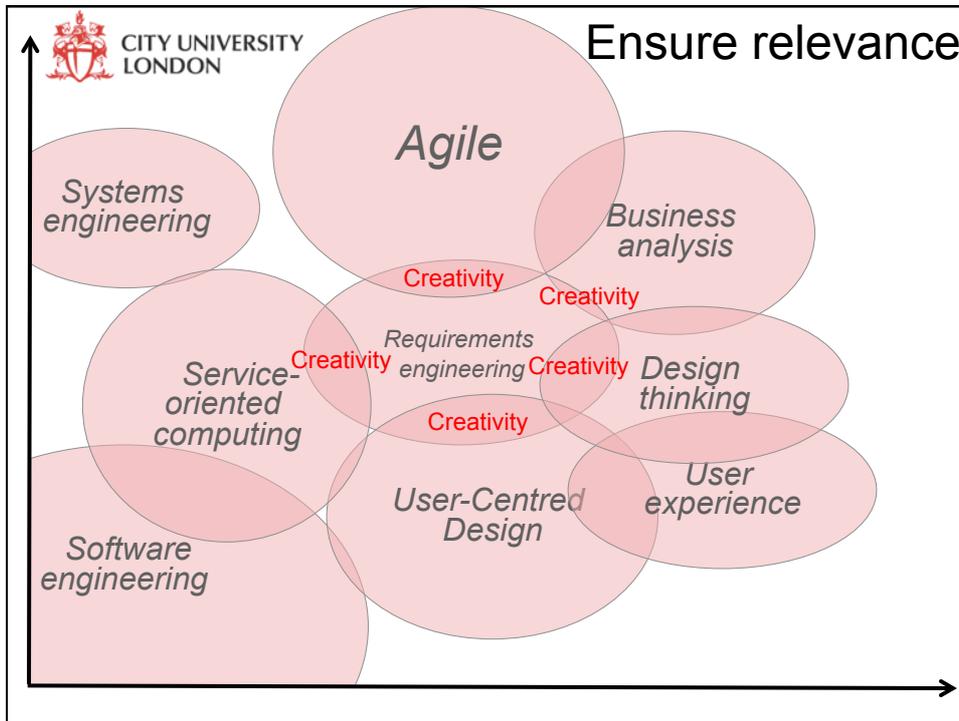

| | t_1 | t_2 | t_3 | t_4 | t_5 |
|-----------------|-------|-------|-------|-------|-------|
| car1.runsOK | T | ⊥ | ⊥ | T | T |
| cl1.car | | car1 | car1 | car1 | car1 |
| cl2.car | | car1 | car1 | car1 | car1 |
| cov1.cl | | cl1 | cl1 | cl1 | cl1 |
| Fulfilled(cov1) | | ⊥ | ⊥ | ⊥ | T |
| rep1.cl | | | cl2 | cl2 | cl2 |
| Fulfilled(rep1) | | | ⊥ | T | T |

Explore space of specification properties

Explore space of solutions

One solution– to repair before claim

CITY UNIVERSITY LONDON

Centre for Creativity in Professional Practice

“Creatify” Your Requirements Work

Reframe as creative information search and idea discovery

- Structured search of spaces of requirements, emergent qualities, obstacles, configurations, specification properties
- Generates novel and useful outcomes that surprise
- Practical propositions for users

Encourage you to exploit

- Creativity theories and models
- Wide range of creativity support tools
- New types of computational creativity capability

Models of Creativity

REFOCUS

Remember.....

Creativity is

- A **macro-economic driver** for growth
- **Needed** by businesses
- **Funded** by governments
- **Available to help** from requirements work
